**Table S1.** Identification performance (mean number of correct responses) is presented for low familiar sounds (maximum score = 30) and low familiar odors (maximum score = 12) at T2 as a function of group (early blind, late blind, sighted). The standard deviations are presented within the parentheses.

	Identification	
	Low familiar sounds	Low familiar odors
Early blind	6.6 (2.7)	0.07 (0.3)
Late blind	5.7 (3.0)	0.08 (0.3)
Sighted	5.3 (3.0)	0.07 (0.3)
