

Supplementary Figure S3. Stomatal frequency (number of stomata per field) in *S. lycopersicum* (cv. MoneyMaker) and *SchSDD1*-like-overexpressing tomato plants. Stomatal quantification was performed on the abaxial epidermis of fully expanded leaves. The values correspond to the mean of values of four biological replicates. The asterisk symbol * shows significant differences between wild type and transgenic plants (Student's t-test, $p < 0.05$).
