Supplementary Figures and Tables

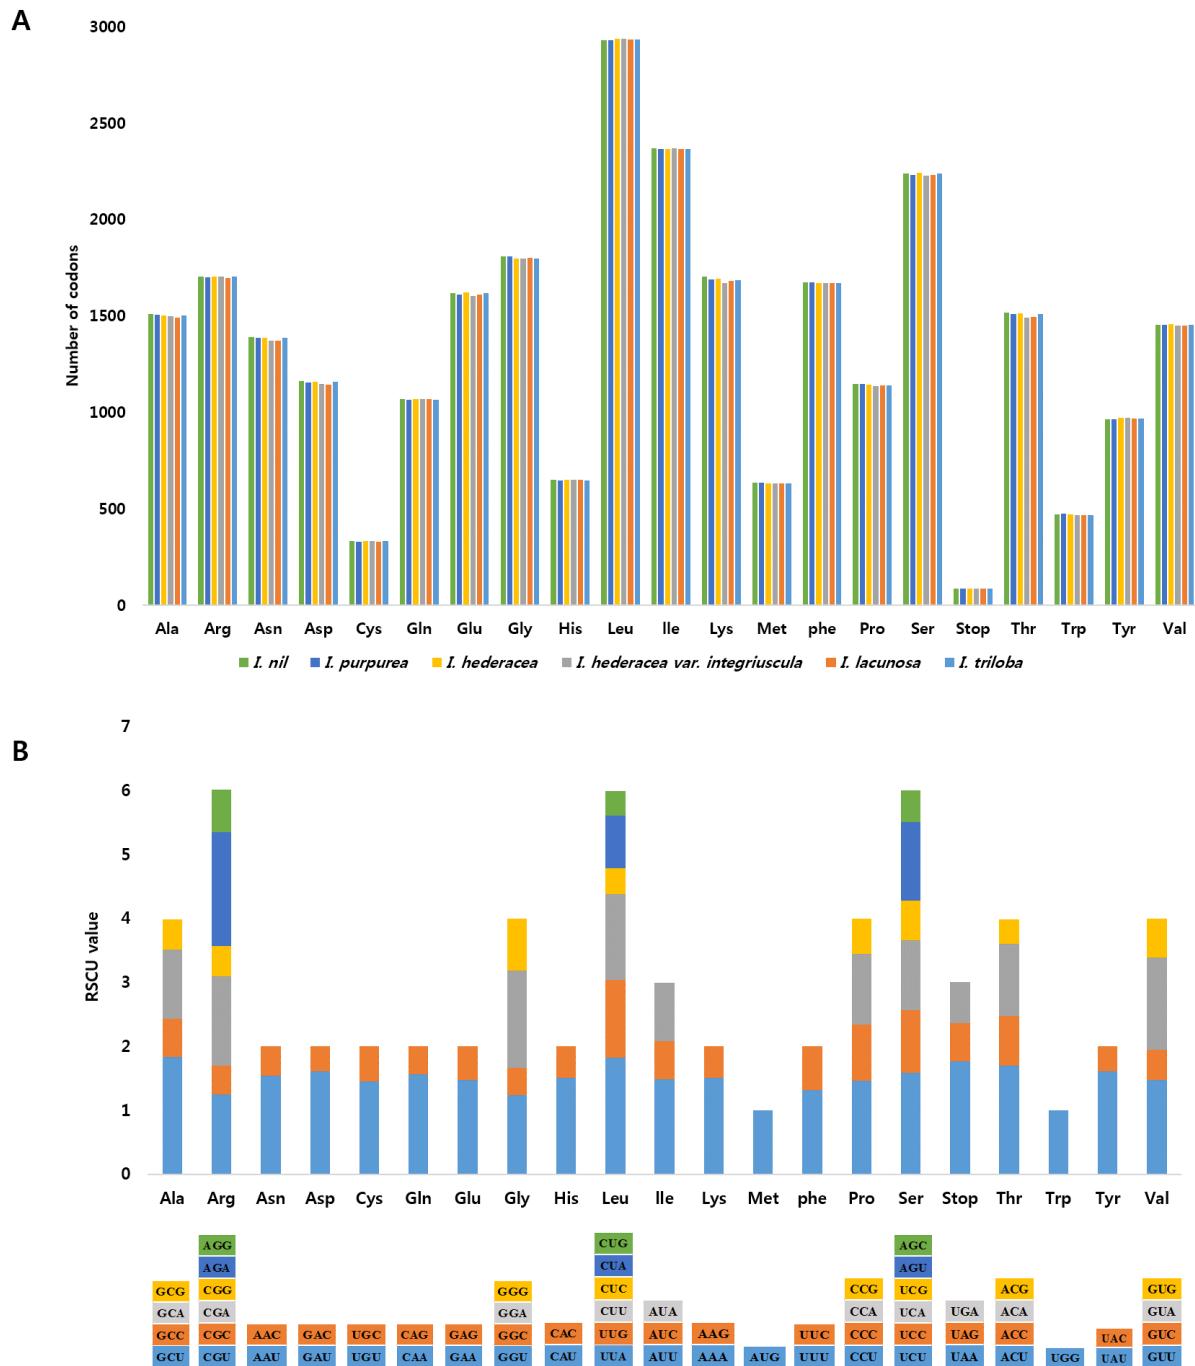

Figure S1 Codon frequencies and RSCU values for six *Ipomoea* chloroplast genomes. (A) Amino acid frequencies for protein-coding sequences. (B) Codon usage for 20 amino acids and stop codons in 78 protein-coding genes.

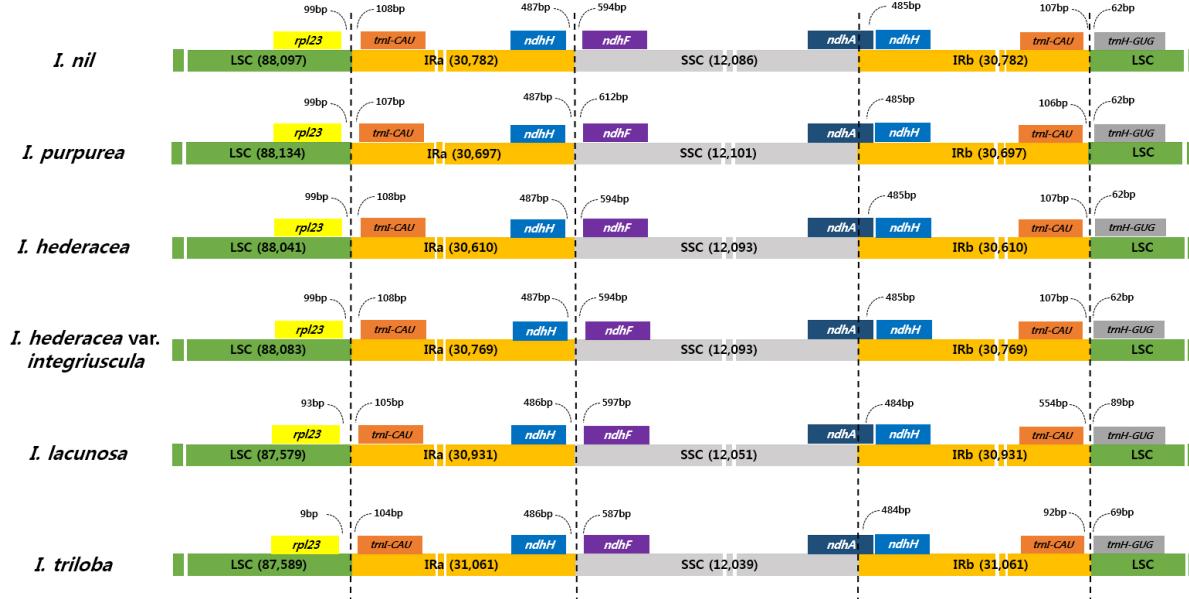

Figure S2 Comparison of the LSC, IR, and SSC junction positions in six *Ipomoea* chloroplast genomes.

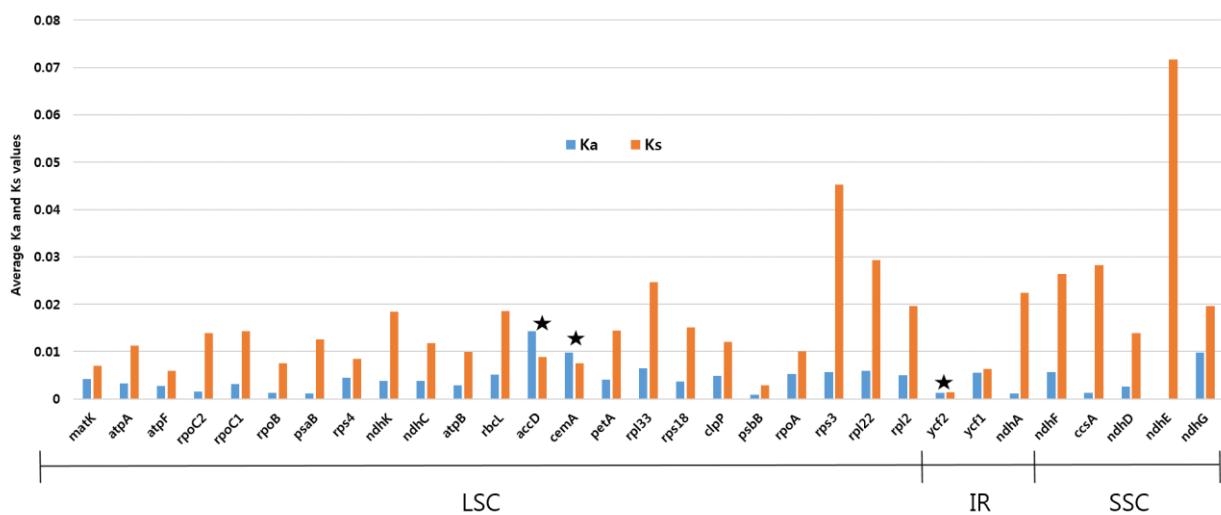

Figure S3 Ka and Ks values for six *Ipomoea* cp genomes. The ratios of non-synonymous substitution (Ka) to synonymous substitution (Ks) were calculated for 78 conserved protein-coding sequences. Genes with Ka or Ks = 0 are not shown. Average Ka and Ks values are shown in blue and orange, respectively. Black stars indicate genes undergoing positive selection ($Ka/Ks > 1$) among the six *Ipomoea* species.

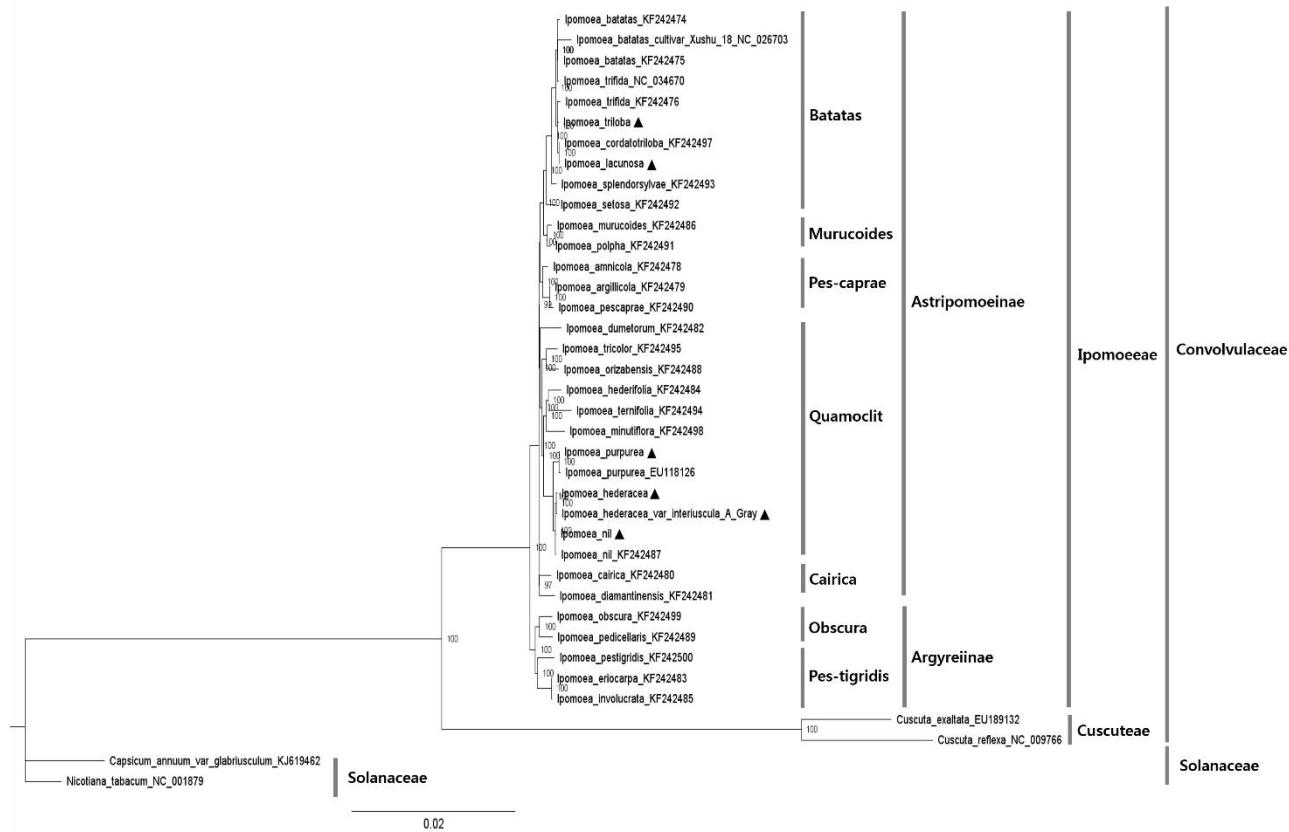

Figure S4 Phylogenetic tree based on 48 protein-coding genes from six *Ipomoea* and 28 *Ipomoea* species using Bayesian posterior probabilities (PP).
