

SUPPLEMENTARY FIGURE S3

SUPPLEMENTARY FIGURE S3. HPLC analyses of Apigenin7-O-glucoside in leaves of tobacco plants overexpressing CcMYB12 protein. Leaves from wild type (WT) and T3 transgenic tobacco lines 3, 13 and 21 were tested. Error bars indicate the SD of the average of apigenin 7-O-glucoside determined as triplicates in three independent biological replicates. Asterisks indicate a statistical difference (*p-value < 0.05) between the means for WT and for tested transgenic samples, according to Student's t-test. DW, dry weight.
