

Supplementary Figure S10. Plants expressing plastid-targeted Fld contained higher levels of active cytokinins. CKs were measured in leaf tissue from WT, pfld and cfld plants at 73 dpg . Values shown are means $\pm \mathrm{SE}(\mathrm{n}=3-5)$. Asterisks indicate significant differences with respect to the wild type (ANOVA, $\mathrm{P}<0.05$ ). The graph was created using the visualization system VANTED (Junker et al., 2006). MVA, mevalonate; MEP, methylerythritol-4-phosphate; DMAPP, dimethylallyl pyrophosphate; HMBDP, (E)-4-hydroxy-3-methyl-but-2-enyl diphosphate. Units in the ordinates are nmol g ${ }^{-1} \mathrm{FW}$.
