1 Supplementary Figures and Tables

1.1 Supplementary Figures

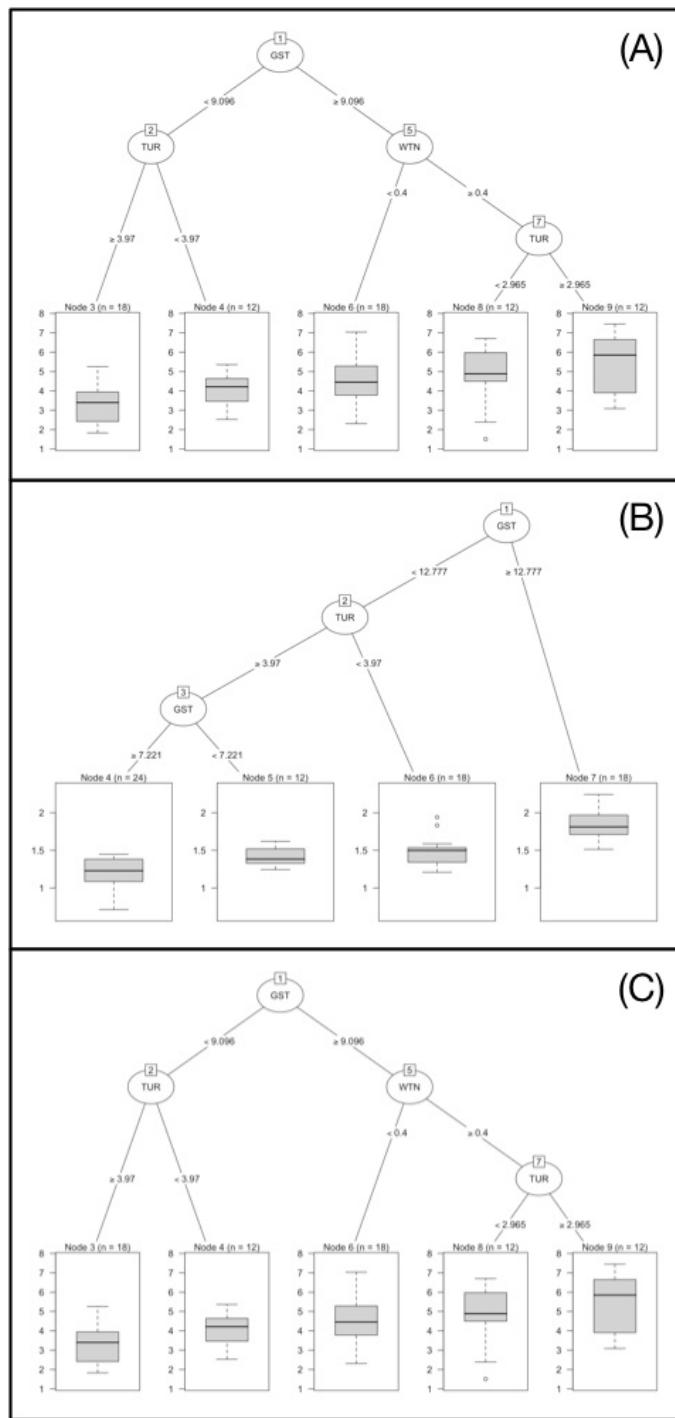

Supplementary Figure 1. Relationships of elevation and growth season temperature (GST) from the 12 sampling water bodies. R and P values of Pearson correlation are shown.

	GST	pH	salinity	DO	TUR	WTN	WTP	WNH	WNO
Comp.1	0.781	-	-	0.102	-0.590	-0.176	-	-	-
Comp.2	0.539	-	-	-0.528	0.648	-	-	-	-

Supplementary Figure 2. Correlation between the first two components of the PCA and the 9 variables (growth season temperature (GST), pH, salinity, dissolved oxygen (DO), turbidity(TUR), water total nitrogen (WTN), water total phosphorus (WTP), NH_4^+ (WNH) and NO_3^- (WNO)). Loadings for the components are shown.

Supplementary Figure 3. Regression tree showing factors that drive NSC (A), starch (B) and SS (C) in the Qinghai-Tibetan Plateau. Length of the nodes is proportional to the reduction in the overall deviance. The explanatory variables included are growth season temperature (GST), dissolved oxygen, turbidity (TUR) and total nitrogen (WTN) derived as linear combinations of variables that explain 87.35% of the variance of the environment data.

Supplementary Figure 4. Relationships of the leaf non-structural carbohydrate (NSC) (A and D), starch (B and E) and SS (soluble sugars) (C and F) to growth season temperature (GST) and water turbidity of the all three *Myriophyllum* species from 12 sampling water bodies. The data are presented as the mean \pm 2 standard errors. NSC = SS + starch

1.2 Supplementary Tables

Supplementary Table 1 Principal characteristics of the 12 sampling water bodies from Qinghai-Tibetan Plateau, China. For water physical and chemical characteristics, the mean values were given ($n = 3$). All samples were collected from 10:00 to 15:00. Cond: conductivity; GST = growth season temperature; Cond = conductivity; TDS = total dissolved solids; DO = dissolved oxygen; TN = total nitrogen; TP = total phosphorus

No.	Species	Habitat type	Latitude(N)	Longitude(E)	Elevation (m)	GST (°C)	pH	Salinity (%)	Cond ($\mu\text{S cm}^{-1}$)	TDS (mg l^{-1})	Turbidity (NTU)	DO (mg l^{-1})	TN (mg l^{-1})	NH ₄ -N (mg l^{-1})	NO ₃ -N (mg l^{-1})	TP (mg l^{-1})
