

Figure S2. Dose–response relationship following UVB exposure for eggs of *N. californicus* fed on *T. urticae* (Tu) and tea pollen (Te). Vertical lines above and below each plot indicate the 95 % confidence interval. Experiments were performed triplicated excepting 0.174 kJ m⁻² (once) and 0.192 kJ m⁻² (twice). Number of eggs used for a batch was 39.5 ± 7.7 .
