

Supplemental Figure 1

Replicates of Figure 2A. alamarBlue turnover was measured in nutrient-starved *M. abscessus* in 2-fold dilutions beginning at an OD₅₉₀ of 0.5 (left) or 0.25 (right) to test for linearity of the assay.

Supplemental Figure 2

Replicate of Figure 2B. Nutrient-starved *M. abscessus* was serially 2-fold beginning at an OD₅₉₀ of 0.25. Viable bacteria as measured by CFUs was correlated to alamarBlue turnover by RFUs.
