2. State Key Laboratory Base of Eco-Hydraulic Engineering in Arid Area, Xi'an University of Technology, Xian 710048, China

The qPCR reaction mixture comprised 1 µL of DNA template, 0.25 µL of each 20 pM primer (ShengGong, China), 10 µL of SuperReal PreMix Plus (TianGen, China), and 8.5 µL of RNase-free water. The qPCR conditions comprised an initial hold for 15 min at 95 °C, followed by 40 cycles for 10 s at 95 °C, 20 s at the annealing temperature, and then 32 s at 72 °C. To eliminate the effects of inhibitory compounds, the DNA template was a tenfold dilution of extracted DNA. qPCR was performed using Bio-Rad IQ5 (Bio-Rad, USA).

Table S1. PCR primers used in this study

Gene name	Primer	Size (b)	Annealing temperature (°C)	References
<i>tetC</i>	F: GCGGGATATCGTCCATTCCG R: GCGTAGAGGATCCACAGGACG	207	59	(Aminov et al., 2002)
