

TABLE A1 | A summary table for the Omnibus ANOVA on the mean reaction times as a function of the between-subject factor Task Order (single Go/NoGo task first – joint Go/NoGo task second vs. joint Go/NoGo task first – single Go/NoGo task second) and the within-subject factors Number of Element (one-element condition, nine-element condition), Task Setup (joint Go/NoGo, single Go/NoGo), Stimulus Screen Position (compatible, incompatible), Stimulus Ball Position (compatible, incompatible) in Experiment 1.

Effect	df	F	p	η^2_p
Task Order	1,37	<1	0.599	0.008
Number of Element	1,37	22.42	<0.001	0.377
