

Supplementary FIGURE 1 | Immunofluorescence identification and immunophenotyping of bone marrow derived-EPCs.

Bone marrow derived-EPCs were isolated from rat femurs, and Dil-Ac-LDL and FITC-UEA-1 were added. **(A)** Morphology of bone marrow derived-EPCs cultures at different time after plating. Scale bar: 200µm. **(B)** Dil-acLDL and FITC-UEA-1 staining. Scale bar: 50µm. **(C)** Histograms for cell surface markers by flow cytometry. Three independent experiments were performed.
