

Supplemental Figure 1. Expression analysis of TG and endogenous ADCY8 normalized to HPRT in transgene and wild type mice. Amplification plot of RT-qPCR. 1-Hs. ADCY8 (human) expressed only in TG (N=3); 2-HPRT (housekeeping gene) expressed in WT(N=3) and TG (N=3); 3-Mm.ADCY8 (endogenous) expressed in WT (N=3) and TG (N=3).

Supplemental Figure 2. Representative power spectrum plots for WT and TG<sup>AC8</sup> mice.

Supplemental Table 2. Top, listing of mean and standard error of the measured HRV parameters. ‡ p<0.05 for main effects genotype differences. ‡ p<0.05 for main effects of drug differences. If a significant interaction effect was found, as determined by a linear mixed effects model with difference of least squares means post hoc test and Satterthwaite's approximation for degrees of freedom, then \* p<0.05 for significant pairwise genotype differences, and Θ p<0.05 for drug differences. F-value and p-value for interactions has been provided for all samples in the table below.

Supplemental Table 3. Abundance of transcripts for selected genes in TG<sup>Ac8</sup> and WT mice determined by RT-qPCR. Mean and STE: and p-value by Student's t-test are presented. The last column shows the ratio of TG<sup>Ac8</sup> to WT. Heat map represents relative quantification (RQ) of each assessed transcript. \*p<0.05, \*\* p<0.01. Note significant upregulation of Arrb2, Dab2, GRK5 and downregulation of RGS2, PNMT, and GNG2 in TG<sup>Ac8</sup> samples.
