

Supplementary Figure 1 – Peptide-specificity of T cells after *in vitro* expansion.

Representative flow cytometric analysis of *in vitro* expanded T cells by means of peptide-MHC pentamers after culture with (A) pEBV_1, (B) pEBV_2 or (C) pFLU. Cells were gated on single, live, CD3+ and CD8+ (CD4-, left panel). Fluorescence minus one (middle) versus pentamer stained cells (right) are shown.
