Increased flame retardancy of enzymatic functionalized PET and nylon fabrics via DNA immobilization

Figure 1: Chemical structure of Methylene Blue a) and Coomassie Brilliant Blue

Table S1: HPLC gradient for the measurement of PET hydrolysates		
Time	A (H ₂ O + 0.1 % Formic Acid)	B (MeOH + 0.1 % Formic Acid)
[min]	[% v/v]	[% v/v]
2	50	50
9	0	100
12	0	100
14	70	30
