Table SM 1 Descriptive statistics of the two samples

	HRS women	HRS men		WLS women	WLS men
N	6,165	4,576	N	4,625	4,218
Childless (%)	10.8	12.5	prop childless	6.6	6.3
Birth year (quartiles)			Birth year(quartiles)		
Q1	1932	1932	Q1	1939	1938
mean	1940	1939	mean	1939	1939
Q3	1949	1949	Q3	1939	1939
Education (%)			Education years (%)		
<High school	16.6	15.6	High school	58.3	48.6
High school	38.9	32.3	Some college	16.9	16.7
Some college	24.4	22.8	BSc	13.8	15.3
>College	19.9	29.3	>BSc	11.0	19.5
Age first marriage (%)			Age first marriage (%)		
<21	30.6	13.3	<21	37.8	11.6
21-25	24.3	36.2	21-25	47.4	57.3
26-30	7.3	14.5	26-30	7.6	19.9
31-35	3.9	5.9	31-35	1.7	4.3
36-40	3.3	3.1	36-40	0.5	1.1
41+	4.4	7.3	41+	0.8	1.3
never married	3.1	4.2	never married	3.5	3.6
unknown age	23.9	15.5	unknown age	0.7	0.9
First occupation (%)			First occupation (%)		
clerks	22.9	4.8	clerks	44.5	6.2
sales	9.2	8.9	sales	3.3	4.9
services	13.1	5.1	service	11.9	2.4
manager	9.5	16.9	administrators, managers	2.0	6.5
farming	0.9	2.8	farming	0.9	7.7
professionals	16.1	15.6	professional, technical	22.6	26.4
mechanics, production	20.8	27.7	manufacturing, construction	9.5	42.3
operators	7.5	16.2	no job	5.4	3.6
army	0.1	2.0			
Religion (%)			Religion (%)		
not religious	6.5	10.9	not religious	7.7	11.5
Other	1.0	1.0	Other	15.3	13.7
Protestant	61.6	57.1	Protestant	37.5	36.2
Roman Catholic	28.8	28.7	Roman Catholic	39.6	38.5
Jewish	2.1	2.4			

Note: for birth year we report the mean and the first and third quartile. In the WLS there is little variation in birth year due to the sampling design.

Notes: N GWAS are the number of participants in the GWAS study, nr SNPs GWAS are the number of SNPs reported in the result file from the original GWAS. SNPs HRS are the number of SNPs included in the PGS with p-value ≤ 1 in HRS, SNPs WLS are the number of SNPs included in the PGS with p-value ≤ 1 in WLS. bHRS and pHRS are the b-value and p-value of the effect in the HRS sample, including only 1 PGS and 20 principal components, bWLS and pWLS are the b-value and p-value of the effect in the WLS sample, including only 1 PGS and 20 principal components. +EndometriosisB reflects the more severe form of the disease. ++The normal azoospermia GWAS used compares individuals with azoospermia with those with normal sperm count, the second azoospermia compares them to men with normal sperm count and those with oligozoospermia. Abbreviations: PGS, polygenic risk scores; NEB, number of ever born children, AFB, age at first birth; PCOS, polycystic ovary syndrome; TDS, testicular dysgenesis syndrome; TGCC, testicular germ cell tumors. Significant p-values ($p < 0.05$) are shown in bold.

Notes: We control for the first 20 genetic principal components (PCs). Abbreviations: OR, odds ratio; CI: confidence interval; p, p-value; PGS, polygenic risk score; NEB, number of children ever born, AFB; age at first birth; PCOS, polycystic ovary syndrome. Due to perfect separation the estimates for the interaction between some of the religious categories and age at marriage, and the principal components with age at marriage, the effects of these interactions could not be estimated.

Table SM 11 The relationship between AFB genetic risk scores and age at marriage and childlessness in the female HRS sample, descriptively

		Age at first marriage								
		<21	21-25	26-30	31-35	36-40	41+	never married	unknown age	All
N		1879	1526	450	234	146	280	178	1476	6169
N	with child	1801	1413	381	175	119	227	26	1326	5468
N	childless	78	111	69	58	27	53	152	150	698
%	with child	0.958	0.927	0.847	0.751	0.815	0.811	0.146	0.898	0.887
%	childless	0.042	0.073	0.153	0.249	0.185	0.189	0.854	0.102	0.113
Mean AFB PGS	with child	0.176	0.443	0.461	0.272	0.207	0.186	0.206	0.387	0.320
Mean AFB PGS	childless	0.080	0.374	0.551	0.480	0.901	0.566	0.530	0.393	0.440

Abbreviations: PGS, polygenic risk score; AFB, age at first birth; NEB, number of children ever born

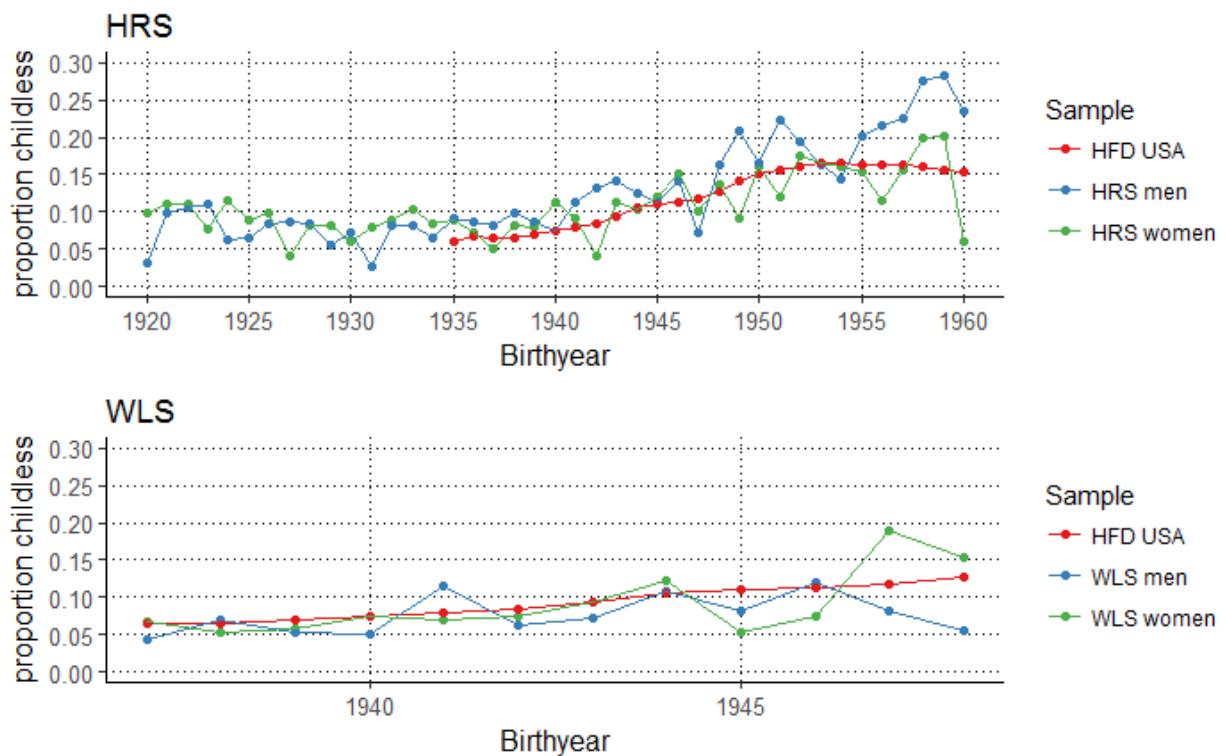

Figure SM1 Childlessness levels in our data and as reported in the human fertility database (HFD) for the USA. For the HRS we show the estimates for the white sample.

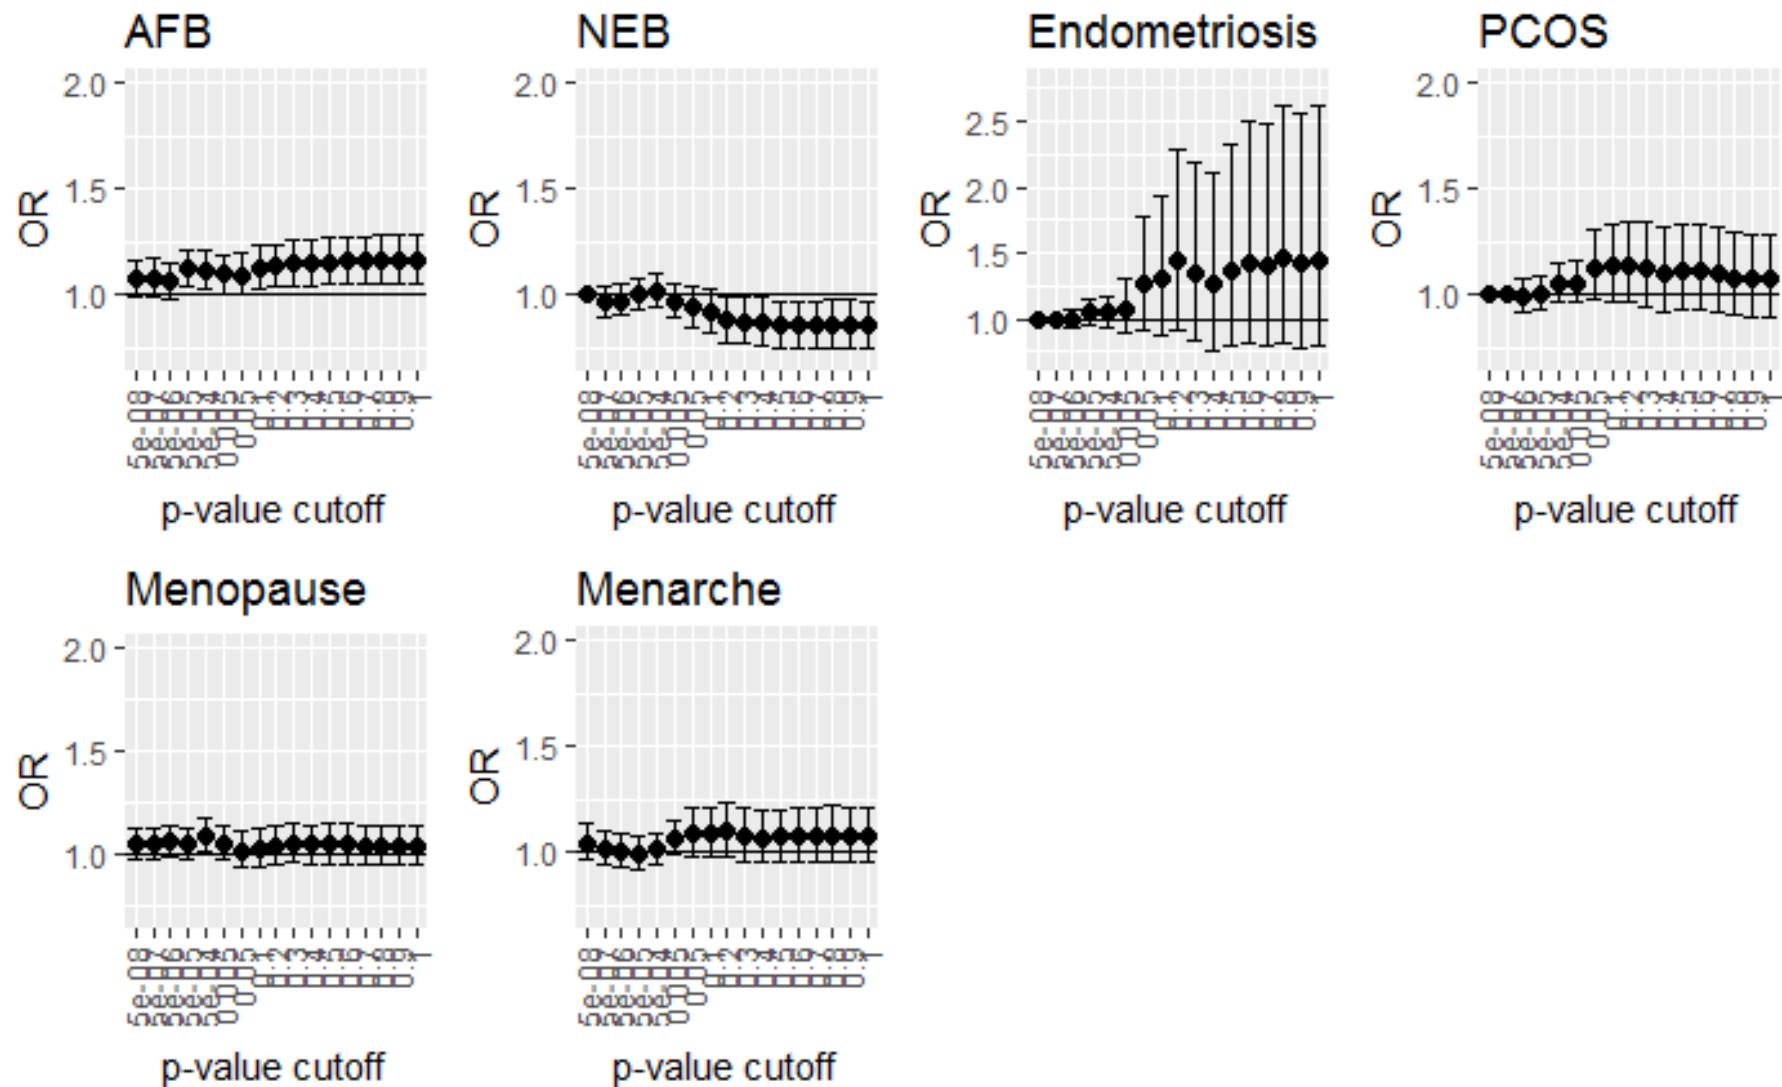

Figure SM2 PGS effects on childlessness using different p-value cutoffs for women in the HRS sample, univariate models with 20 principal components as control variables included. OR and 95% CI displayed. Abbreviations: OR, odds ratio; AFB, age at first birth; NEB, number of children ever born; PCOS, polycystic ovary syndrome

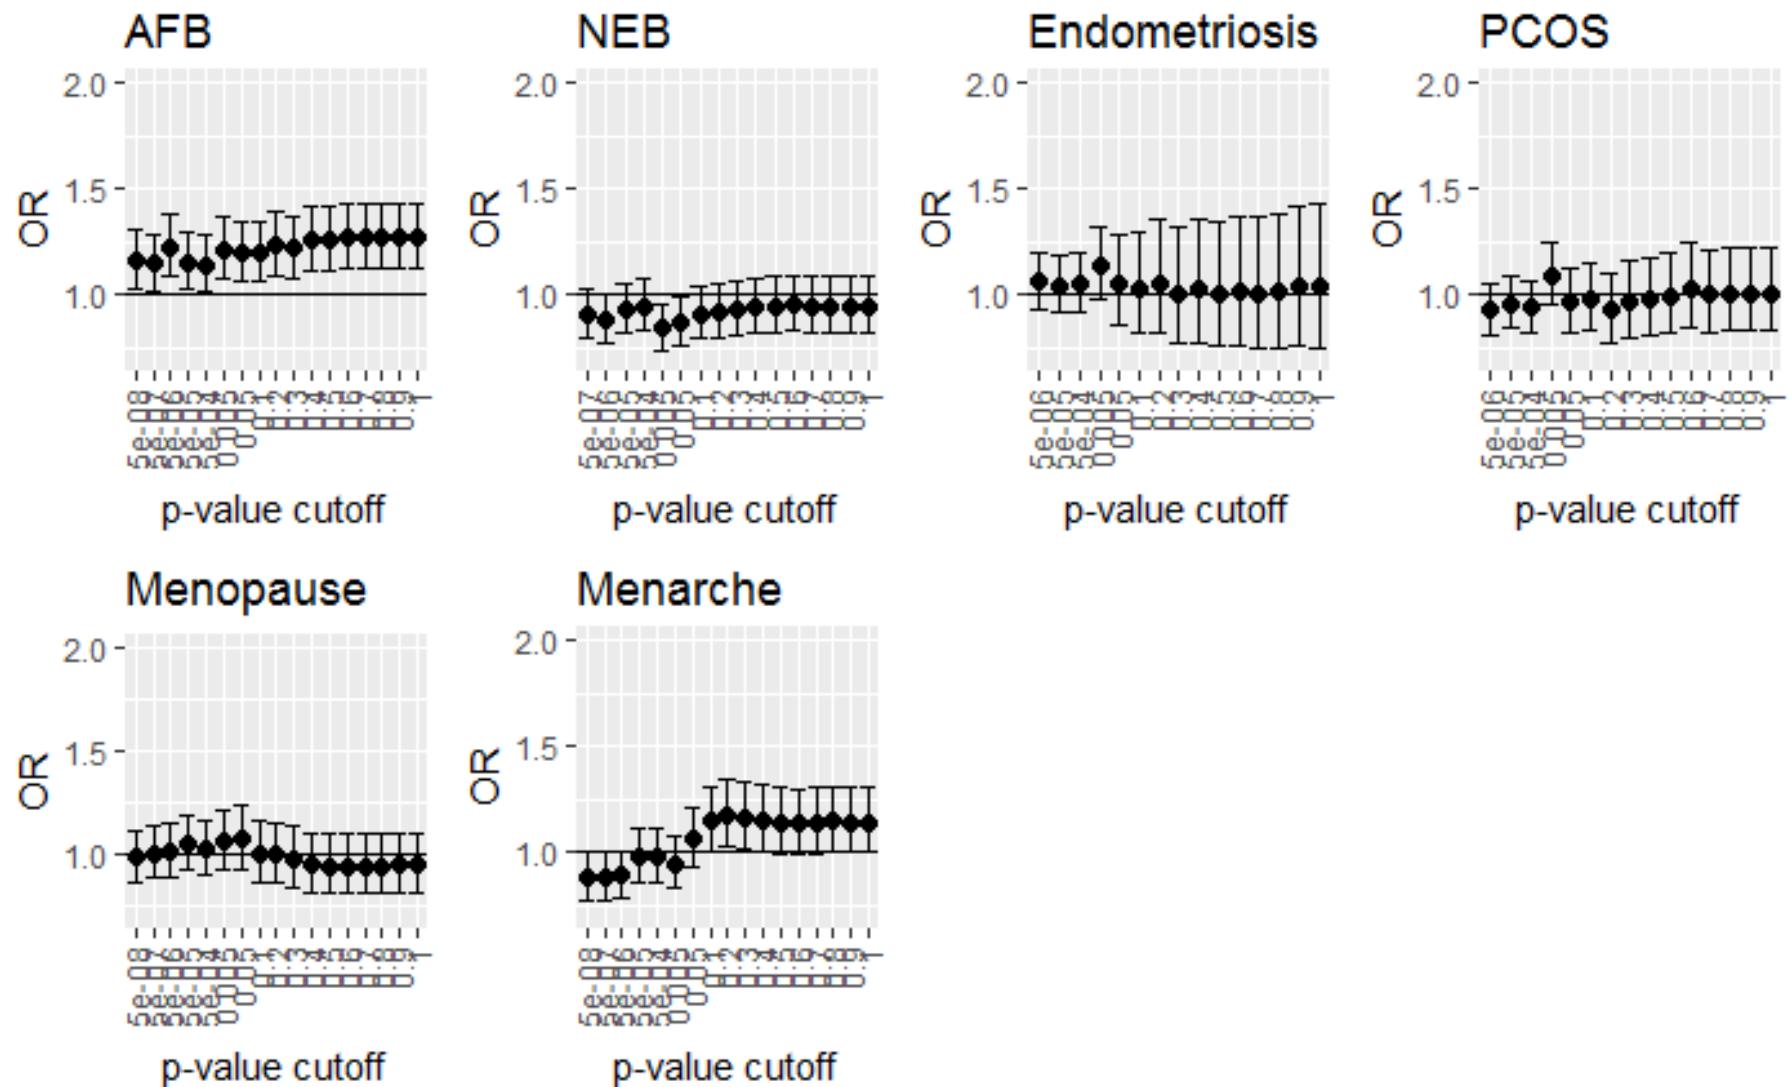

Figure SM3 PGS effects on childlessness using different p-value cutoffs for women in the WLS sample, univariate models with 20 principal components as control variables included. OR and 95% CI displayed. Abbreviations: OR, odds ratio; AFB, age at first birth; NEB, number of children ever born; PCOS, polycystic ovary syndrome

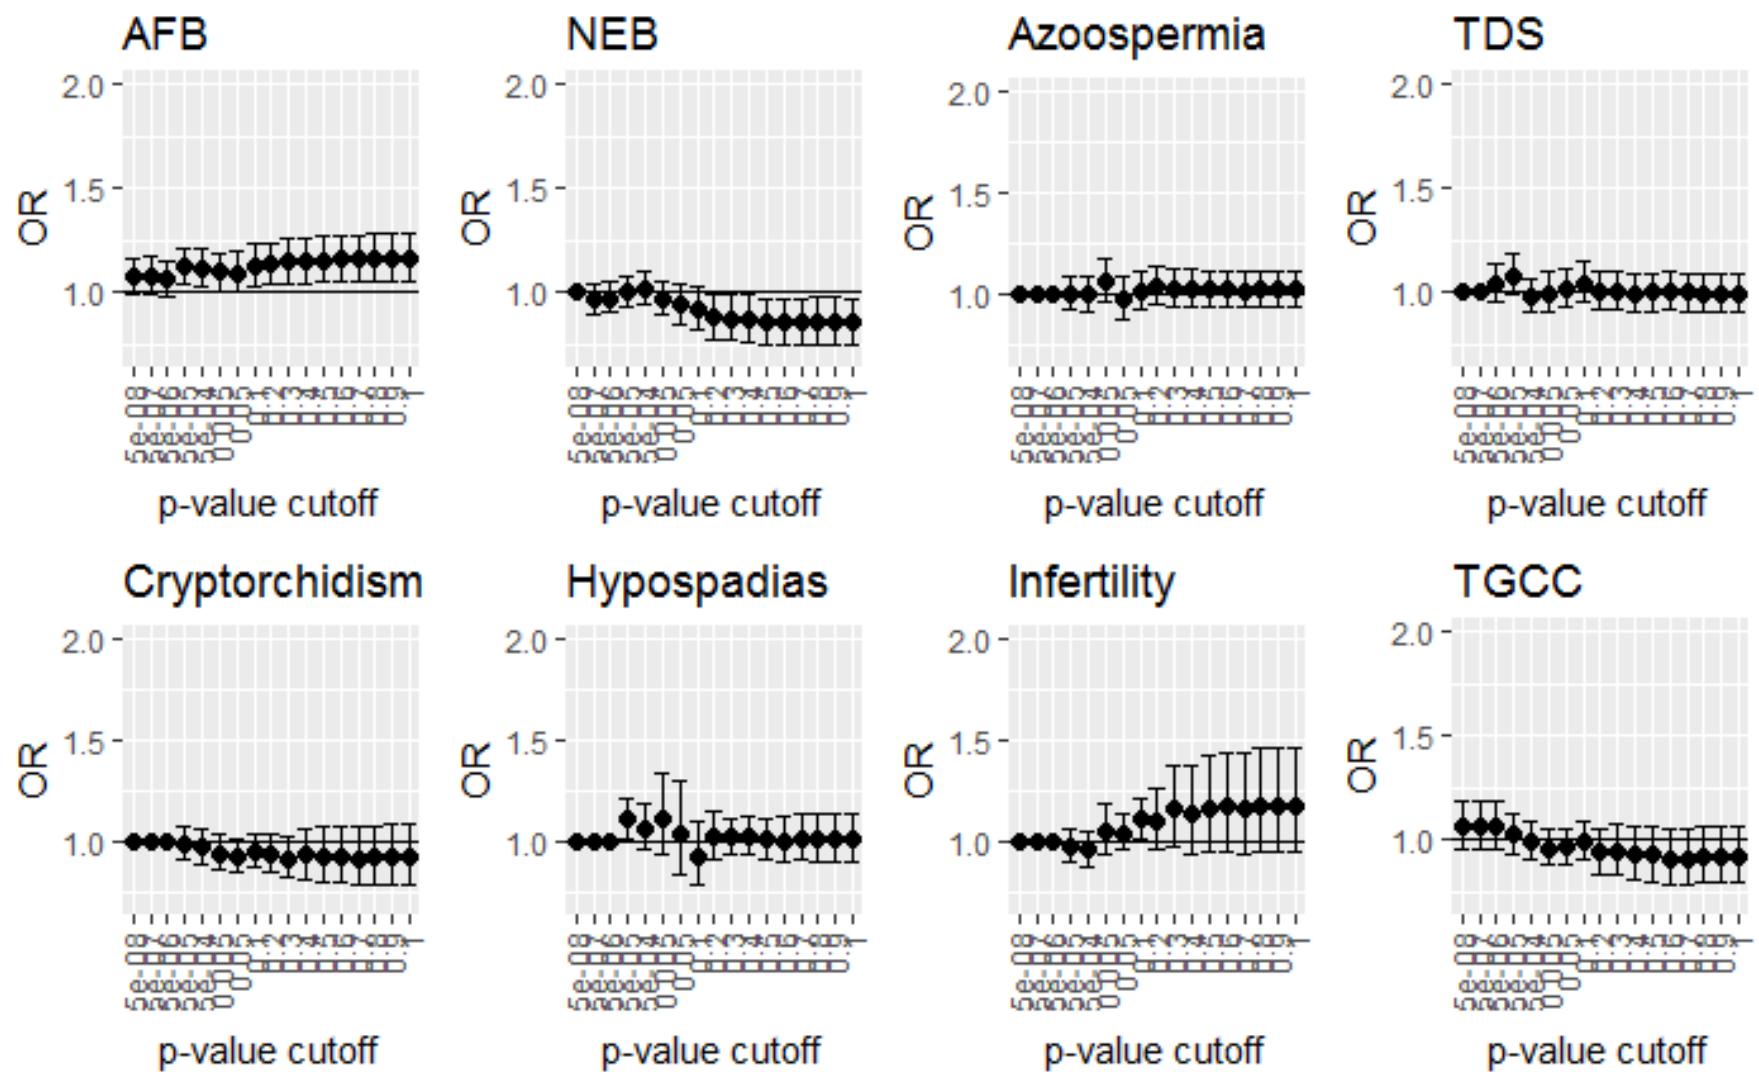

Figure SM4 PGS effects on childlessness using different p-value cutoffs for men in the HRS sample, univariate models with 20 principal components as control variables included. OR and 95% CI displayed. Abbreviations: OR, odds ratio; AFB, age at first birth; NEB, number of children ever born; TDS, testicular dysgenesis syndrome; TGCC, testicular germ cell tumors.

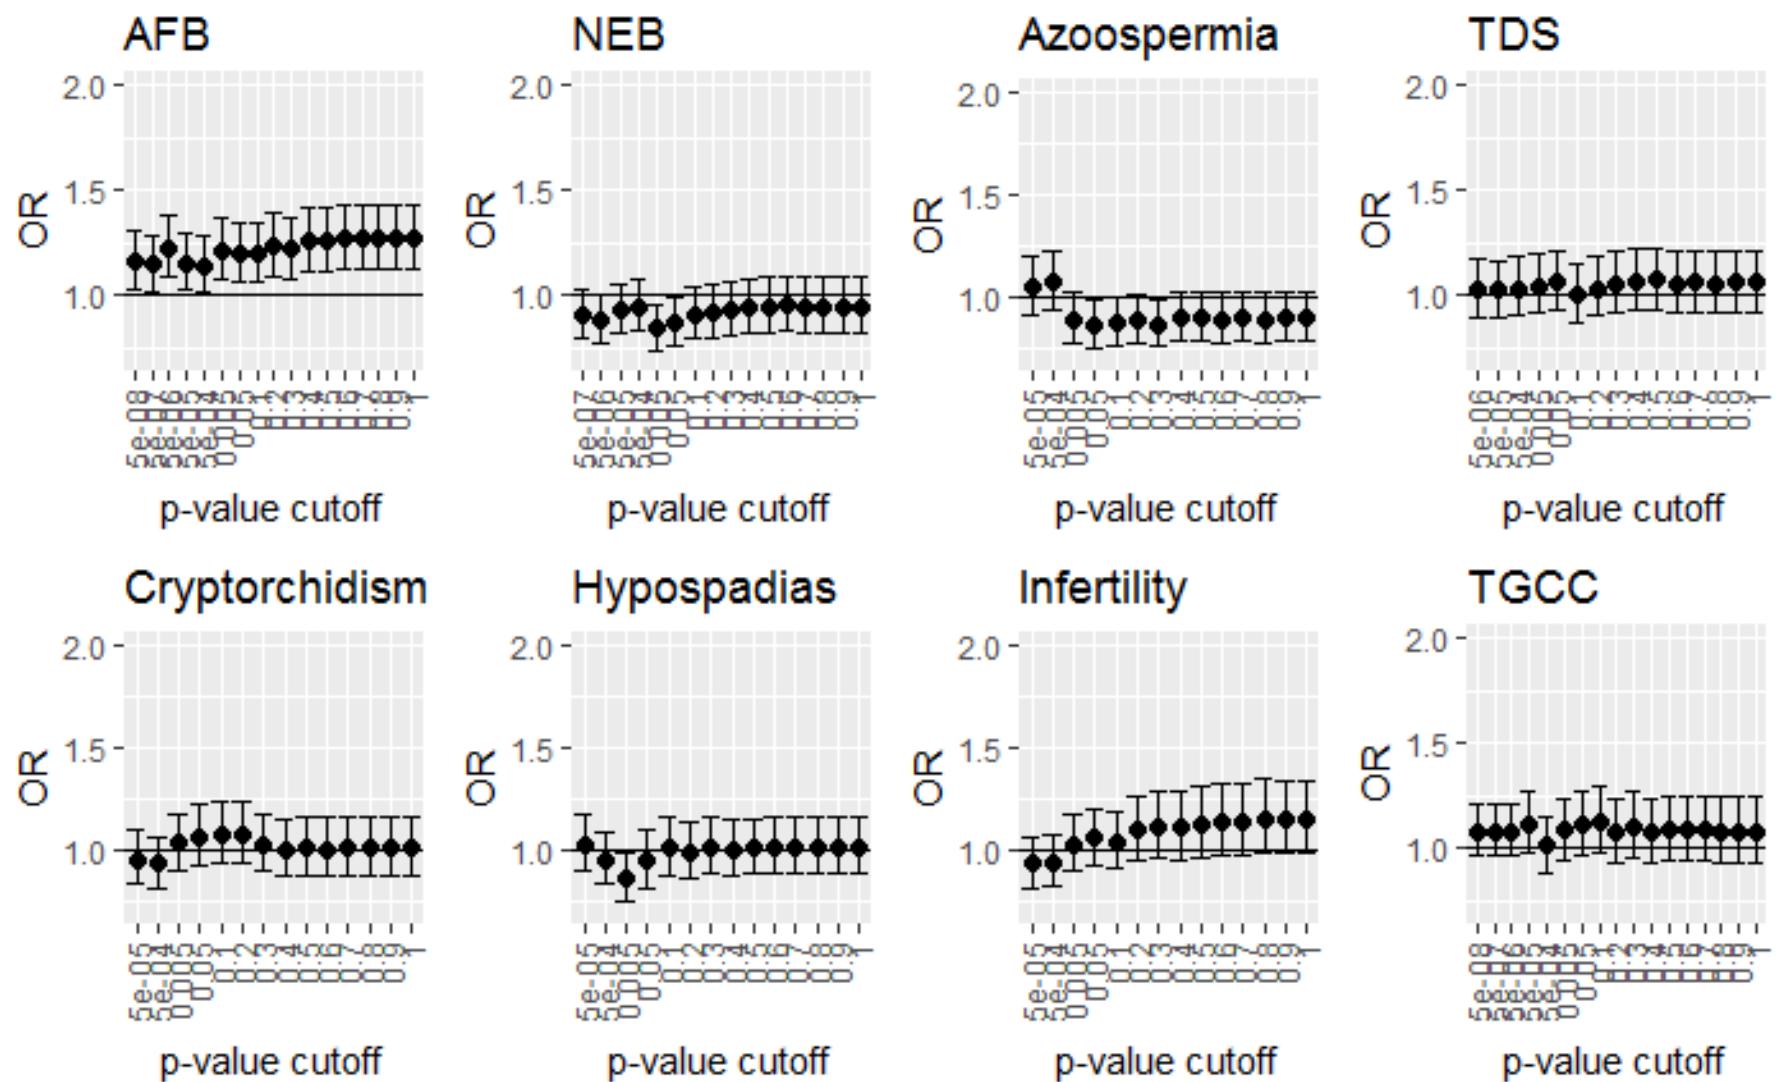

Figure S5 PGS effects on childlessness using different p-value cutoffs for women in the HRS sample, univariate models with 20 principal components as control variables included. OR and 95% CI displayed. Abbreviations: OR, odds ratio; AFB, age at first birth; NEB, number of children ever born; TDS, testicular dysgenesis syndrome; TGCC, testicular germ cell tumors.
