^a missing rank numbers corresponded to contaminants

^b A measure of the protein confidence for a detected protein, calculated from the peptide confidence for peptides from spectra that are not already completely “used” by higher scoring winning proteins

1.4 Supplementary Table S4

Identified proteins (1% global FDR) in each wheat, rye and barley gluten protein type after chymotryptic hydrolysis with their UniProtKB accession number, species, name, rank, score, coverage and number of identified peptides. The rank of a specific protein is given relative to all other detected proteins.

^a Missing rank numbers corresponded to contaminants, ^b unused ProtScore, defined as a measure of the protein confidence for a detected protein, calculated from the peptide confidence for peptides from spectra that are not already completely “used” by higher scoring winning proteins, thus reflecting the amount of total, unique peptide evidence related to a given protein
