Figure S1 Examples of a childhood DM1 (column a: age 25y, female, disease duration 15 y), a DM2 (column b: age 57y, female, disease duration 8 y) and a classical DM1 patient (column c: age 59y, female, disease duration 23 y) showing FLAIR weighted MRI images in axial, sagittal and coronal view. In contrast to classical adult DM1 and DM2 the childhood onset DM1 patient shows no signs of major brain atrophy and no obvious structural abnormalities
