B

LEGEND SUPPLEMENTARY FIGURE

Supplementary Figure 1: A. Plasma levels of HPA axis-activating cytokines during *T. cruzi* infection. Plasma levels of IL-1 β , TNF- α , IFN- γ and IL-6 were assessed throughout acute infection. **B.** StAR ARNm expression in adrenal glands from Tc-infected mice during infection, assayed by RT-qPCR. Data are expressed as mean \pm SEM, from 3-5 mice/group/day. Results are representative from at least three independent experimental rounds. In all cases * $p < 0.05$ vs. day 0 pi. n.d.: Non-detectable; pi: post-infection; AU: arbitrary units.
