

Supplementary Table 1 Attention for sex differences in pain and FM research

Essentials of study design	Species	Total sample size (n) or size/group	% ♀	Separate analysis of sex or gender	Comment	Study conclusion
Pain perception						
Self-reported pain after pain stimulus in CLBP patients (1)	H	319	47	Yes		Self-reported pain higher in women.
Pain self-report and association with cytokine levels (2)	H	Aprox. 40/group	43-58	Yes	Sex difference in immune system associates with sex bias in pain perception	Self-reported pain higher in women with immune issues
Pain VAS & Likert after pain stimulus (3)	H	HC: 100	59	Yes		Self-reported pain higher in women.
Contact heat-evoked potential measurement (4)	H	26	50	Yes		Emotion-dependent pain sensitivity higher in women.
Electrophysiological rx after post-emotional pain stimulus (5)	H	120	61	Yes		Emotion alters pain perception but does not explain sex bias
Meta-analysis (6): Pain perception Heart rate, Blood pressure, Electrodermal rx Noxious inhibitory controls, variety	H	2269	50	Yes	Many studies are unreliable (too small; invalid results, etc.)	Insufficient evidence for biopsychological factors as basis for sex bias in pain perception; perhaps social factors.
Noxious injection in gonadectomized mice (7)	A	6/group	50	Yes	Small groups. Sex bias in pain perception in animals directs towards a biological mechanism.	Pain sensitivity higher in females.
Review (8)	H & A	NA	NA	Yes	Reviewed studies are inconsistent in design and results.	Females more sensitive. Underlying mechanism unknown.
Electrophysiology after neuropathy (9a & 9b)	A	?	?	No	First physiological evidence of central sensitization	Central sensitization
Multiple after neuropathy (10)	A	4-6/sex/condition	50	Yes	Immunology concept explains sex bias in pain perception	Involvement microglia and TLR4 in male but not female pain perception
Multiple after neuropathy (11)	A	3-5/group	?	No	Immunology based	TLR8 involvement
Sex differences in immune system						
Meta-analysis (12); multispecies	A	NA		Yes	Well-known	Females have a stronger immune response.
Meta-analysis (13) multispecies	A	NA		Yes	Well-known	Sex bias in immunity exists in many

						animals, especially adults.
Review (14)	H			Yes	Well-known	Mechanisms of sex bias in innate immunity.
Review (15)	H			Yes		Sex affects immunity. (X-linked genes, hormones)
Review (16)	H			Yes	Well-known.	Sex bias in autoimmunity.
Fibromyalgia pathophysiology						
Ultrasonography LANSS (17)	H	242 FM: 51 P: 51 PA: 140	92 55 50	No	Healthy control missing	1 enthesitis abnormality common PA: 92%, P: 90%, FM: 75% FM: LANSS+
<i>In vivo</i> confocal microscopy LANSS (18)	H	34 FM: 17 HC: 17	100	No	Small n, p = 0.01 or 0.02	Thinner corneal stromal nerves and diminished sub-basal plexus nerve density in FM FM: LANSS+
Pain VAS & ¹ H-MR spectroscopy (19)	H	48 FM: 21 HC: 27	81 78	No	small n, no diagnostic relevance	Difference in relative metabolite amount between FM and HC
Self-reported pain and neuroimaging after pain; (20) FM vs HC	H	FM: 16 HC: 13	94	No		FM stronger pain perception
CRP levels; Comparison FM vs. non-FM (21)	H	52535 FM 1125 FM: 51410	92	No	Non-FM may have other problems that increase CRP	CRP and SR increased in FM
Case-control, pain-related evoked potentials Pathology of unmyelinated nerve fibers only in FM (22)	H	FM: 25 Ps: 10 HC: 10	82 80 ?	No	Confirmatory experiments included. Insufficient men	Neuropathy-induced pain in FM
Comparison proinflammatory biomarkers in FM vs. HC (23)	H	105	91	No		FM: increased CRP and SR, but not IL-6 nor IL-8
Comparison proinflammatory biomarkers in FM vs. HC (24)	H	28 FM: 15 HC: 13	93	No	Small, confirmation required	IL-6, IL-8 higher in FM
AutoAb screening via ELISA, RIA, MHA Indirect IF (sera dilutions: 1:10-1:1000) (25)	H	39 FM: 20 HC: 19	100	No	Small groups, No confirmatory studies	Anti-muscle autoAb in 40%-55% PFM patients; absent in HC
IF on cryostat sections on rat liver, stomach, and kidney. (26)	H	478 FM: 223 HC: 255	90 29	No	Prejudice perceivable in study design. Screened on rat tissue; HC not sex nor age matched.	No autoAb in PFM
AutoAb screening via ELISA and IF (patient sera at 1:500-1:1000) (27)	H	FM: 50 CF: 42 AID: 62 NP: 128 HC: 32	82 ? ? ? ?	No	Well-designed.	Anti-serotonin and anti-ganglioside autoAb in 54%- 73% PFM vs. max. 25% in non-FM AID

AutoAb screening via ELISA (28)	H	203 FM 64 HC		Si	Confirmation anti-serotonin autoAb, but no diagnostic significance	Anti-serotonin autoAb: 20% FM, 5% non-pain CTR
AutoAb screening via on HeLa extract via immunoblot (29)	H	PFM: 90 SFM: 35 CF: 114 AID: 19 Pi: 37 HC: 37	86 91 82 95 82 82	No	Test titer immunoblot unknown; No confirmatory test, nor follow-up. Difficult to interpret.	Anti-68/48 kD autoAb in 16% PFM, 13% CF; Anti-45 kD autoAb in 22-37% SFM, Ps; These autoAb are absent in AID and HC.
AutoAb screening via ELISA (30)	H	FM: 39 SLE: 17 HC: 19	92 94 53	No	Test titer unknown; No significantly different from HC No diagnostic value	Anti-DFS70 autoAb associate with sleep disturbances and pain in FM
Screening for Sjögren-related autoAb at clinical lab(31)	H	FM: 185	93	No	Suggests that autoimmunity is involved in FM pathogenesis	30% FM patients have Sjögren-related autoAb

A, animal study; AID, autoimmune disease; autoAb, autoantibody; CF, chronic fatigue; CLBP, chronic low back pain; CRP, C-reactive peptide, ELISA, enzyme-linked immunosorbent assay; FM, fibromyalgia; H, human study; HC, healthy control; ¹H-MR, proton magnetic resonance; IF, immunofluorescence; IHC, immunohistochemistry; LANSS+, neuropathy according to Leeds Assessment of Neuropathic Symptoms and Signs; MHA, microhemagglutination; NP, neuropathy; rx, reaction; P, psoriasis; PA, psoriatic arthritis; PFM, primary FM; Pi, psychiatric issues; RIA, radioactive immunosorbent assay; SFM, secondary FM; SLE, systemic lupus erythematosus; SR, sedimentation rate; VAS, visual analogue scale.
