

Supplementary Material

Supplementary Figure 1. Interbacterial competition assay between *A. tumefaciens* C58 and the *E. coli* candidates that were less susceptible to T6SS killing. The *A. tumefaciens* C58 wild-type or Δ *tssL* were co-cultured at a ratio of 30:1 with *E. coli* BW25113 wild type (BW), the Keio mutant strains, and complemented strains expressing the mutated genes *in trans*. The Keio strain used was (A) Δ *gltA*, (B) Δ *clpP*, (C) Δ *ydhS*, (D) Δ *ydaE*, (E) Δ *cbpA*, and (F) Δ *yeaX*. Data shown are its representative results; at least two independent experiments were performed in each group.
