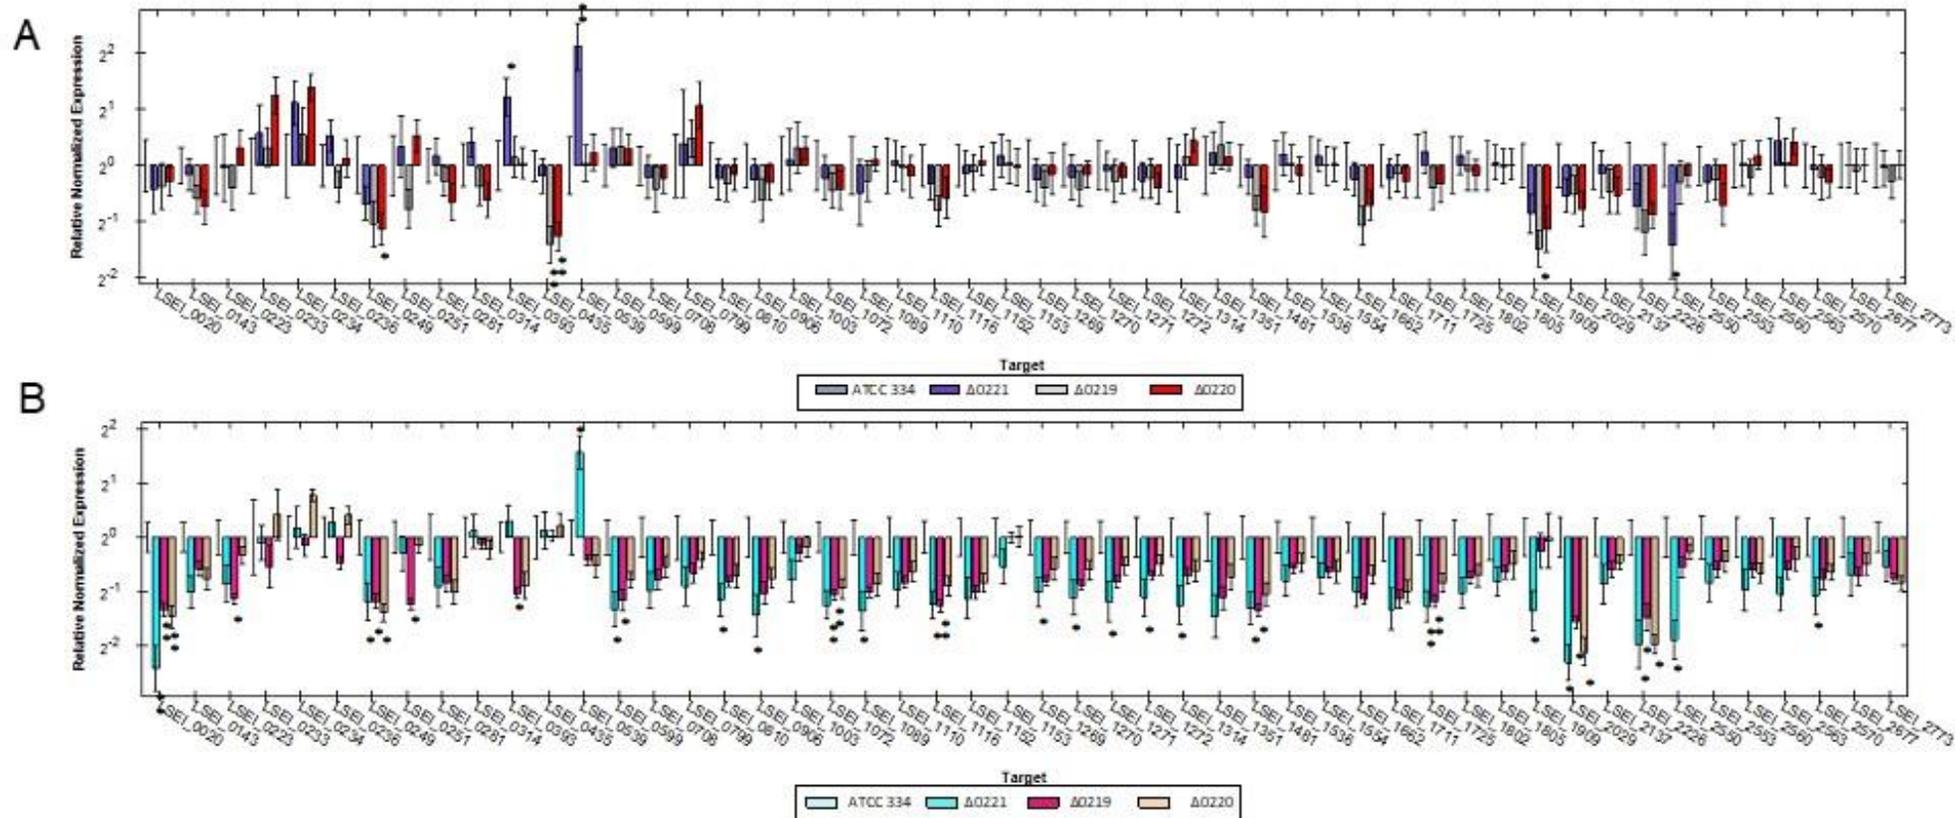

Figure S1. Relative transcript levels of genes implicated in peptidoglycan synthesis in *McwaR*, *McwaS*, *MldcA* mutants compared to the *L. paracasei* parental strain ATCC 334 grown either until exponential (A) or stationary (B) phases. Values are the mean RTL obtained for three biological repeats. Statistical analysis was performed using the unpaired Student *t* test; **, $p < 0.01$; *, $p < 0.05$.

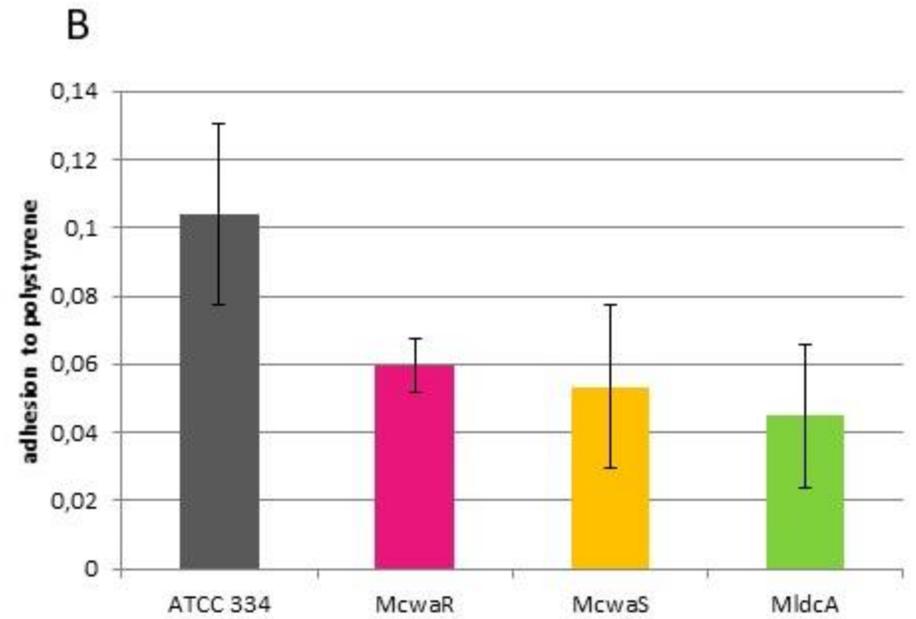

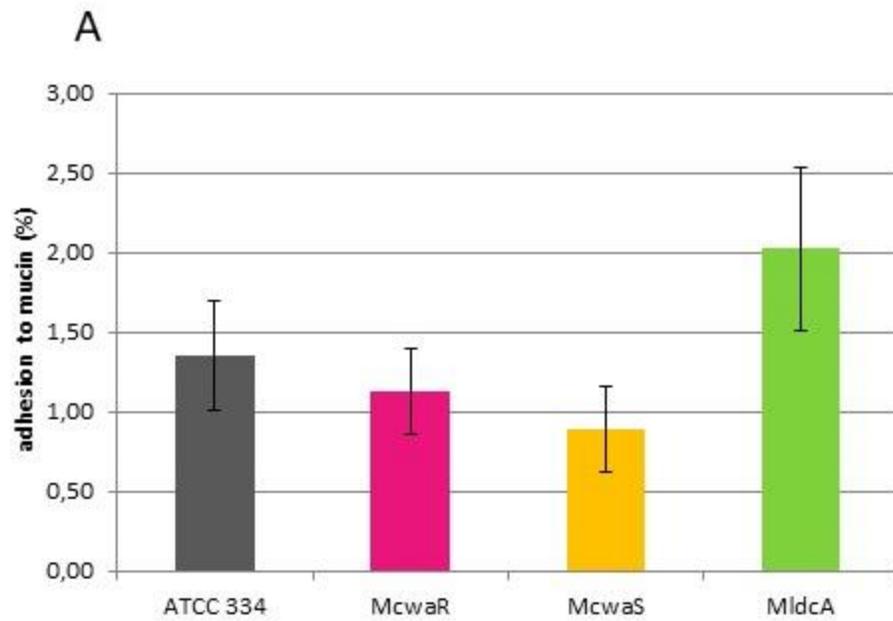

Figure S2. Adhesion of *McwaR*, *McwaS*, *MldcA* mutants and ATCC 334 to polystyrene coated or not with mucin. Adhesion percentage was determined after an incubation of 3.5 h for polystyrene coated with mucin (A) and 48 h for uncoated polystyrene (B).
