| Spil - Wild type | -0.388864 | 0.4071 | 1.30084 | $\mathbf{0 . 0 0 1 8}$ |

Estimate refers to how strains are performing at temperature in comparison to one another. A negative value indicates that the second strain listed is outperforming the first strain. $\mathrm{P}<0.05$ indicates a statistically significant difference between groups.
