Supplementary Figure 1: Missing value information

Note: The bars represent number of missing values (vertical axes) for each metabolite (horizontal axes) and group (Sham in green, while tDCS in orange). The names of the metabolites excluded from the analyses according to the criterion specified are in red colour.

Supplementary Figure 2: Pareto chart from principal components analyses of the metabolite data.

Note: the dashed vertical line indicates the number of principal components explaining \geq 95% of the variance within the metabolite data analysed.
