Abbreviations:

Cbl – cerebellum; Cham – chameleon; Cornsn- cornsnake; Med, Dors.,Lat. – the subdivisions of pallium; Mdl – medulla;

Pretect – pretectum; Tegm. – the tegmentum of mesencephalon.

Symbols:

0 – GFAP-free

(I)–confined radial glia groups, I - less dense radial glia, II - dense radial glia

(#)- confined groups; #,## - less dense or dense glial processes, radial system is not or hardly recognizable

(x) –confined small astrocyte groups, x – astrocytes, xx – dense astrocyte population

Symbols together (e.g. IIx) – mixed populations,predominant first; with zero (e.g. 0I) - scarce populations

Symbols separated (e.g. II/x) – different glial populations in the different areas of the brain part
