

**FIGURE S14** ABA-dependent expression of cold- and ABA-responsive genes under cold stress conditions. Two-week-old seedlings of *Pro35S:RCAR5*, *aba1-6*, *Pro35S:RCAR5/aba1-6* and WT plants were exposed to 4°C and shoots were harvested at the indicated time points. *Actin8* was used as an internal control for normalization. The expression level of each gene in WT was set to 1.0. Data represent mean  $\pm$  SD of three independent experiments. Different letters indicate significant differences between WT and transgenic plants (ANOVA;  $P < 0.05$ ).
