

Supplemental Figure 1. Peripheral blood obtained from LRS chambers contains mononuclear cells with progenitor phenotype. Flow cytometry analyses of PBMC isolated from LRS chambers. **(A)** Forward/Side Scatter. **(B)** CD34⁺ cells show low-level expression of CD45. **(C)** CD34⁺ cells co-express CD31. **(D)** CD34⁺ cells do not express CD14. **(E)** Co-expression of CD117 by the majority of CD34⁺ cells. **(F)** Percentage of CD34⁺CD31⁺CD45^{dim}CD14⁻ progenitor-type cells in immune cell fractions. The data are expressed as mean values±SD. *p value ≤0.05, ** p value ≤0.01.
