

Figure S4. (a) Antioxidant activity ($\mu\text{mol TEAC g}^{-1} \text{ DW}$) and (b) phenolic content (mg phenols $\text{g}^{-1} \text{ DW}$) of marine dissolved organic matter in comparison with various micro- and macro-algae species and food groups. Sub-panels a.1 and b.1. zoom in the honey, micro-, macro-algae, fruits, vegetables and fungi groups. Black dots indicate 5th and 95th percentile values. All results are normalized by dry weight (DW) of DOM.
