Supplementary Figure 1. The *ACT1* intron at different positions in the *INO1* gene is spliced efficiently. **(A)** Schematic depiction of *INO1* gene with the *ACT1* intron at five different positions within the gene. Arrows indicate the position of primers used in RT-PCR analyses. **(B)** RT-PCR analysis of *INO1* mRNA with the intron at five different positions. Genomic DNA PCR indicate the position of unspliced transcripts. The expected positions of spliced and unspliced transcripts obtained by RT-PCR approach for every construct is indicated.

Supplementary Figure 2. The *ACT1* intron at different positions in the *IMD4* gene is spliced efficiently. **(A)** Schematic depiction of *IMD4* gene with the *ACT1* intron at three different positions within the gene. Arrows indicate the position of primers used in RT-PCR analyses. **(B)** RT-PCR analysis of *IMD4* mRNA with the intron at three different positions. Genomic DNA PCR indicate the position of unspliced transcripts. The expected positions of spliced and unspliced transcripts obtained by RT-PCR approach for every construct is indicated.
