## Supplementary Figures

**Supplementary Figure S1. Relative expression of selected genes in the testes of the F<sub>1</sub> generation.** qPCR analysis of markers for (A) spermatogenesis and spermiogenesis: synaptonemal complex protein 1 (*Sycp1*), synaptonemal complex protein 3 (*Sycp3*), protamine 1 (*Prm1*), protamine 2 (*Prm2*), transition protein 1 (*Tnp1*) and transition protein 2 (*Tnp2*); (B) blood testis barrier: cadherin 2 (*Cdh2*), claudin 11 (*Cldn11*); and oxidative stress: glutathione peroxidase 4 (*Gpx4*). The control group represents 100% of relative gene expression. The values are means  $\pm$  SEM, tested by *t*-test.
