Figure S1. Kaplan-Meier analyses of all-cause death-free survival by E/e'

Note: All-cause death-free survival curve is depicted. P value by Log-rank test. Abbreviations: E/e' , ratio of the early transmitral blood flow velocity to early diastolic velocity of the mitral annulus.

Figure S2. Restricted cubic spline of E/e' on the risk of all-cause mortality.

Note: Adjusted HRs of E/e' as a continuous variable for the risk of all-cause mortality is depicted. The model was adjusted for age, sex, Charlson comorbidity index, smoking history, medication (ACEi/ARBs, diuretics, number of antihypertensive drugs, statins), BMI, SBP, DBP, hemoglobin, albumin, fasting serum glucose, HDL-C, TG, 25(OH) vitamin D, hs-CRP, GFR, spot urine ACR, EF at the baseline. Abbreviations: E/e', ratio of the early transmitral blood flow velocity to early diastolic velocity of the mitral annulus; HR, hazard ratio.
